

Turfscape Ranges of Synthetic Grass

Synscape is our flagship grass. Artificial grass cannot look more realistic than our Synscape range. The Synscape is handsdown one of the most popular artificial grass currently in South Africa for garden, balcony, pool, patio, rooms or whatever your need maybe. One of these synthetic lawn types will enchant you and be the perfect choice for your project. Not only do we rave about the Synscape itself, but have a look at the price structure of the product range. Look no further than the Synscape range artificial lawn.

Maintaining the Synthetic Grass

It is possible to enjoy an attractive, luxurious artificial lawn for many years with the minimum of maintenance.

Some cleaning tips:-

- **Cleaning.** Remove leaves, weeds and other debris immediately by means of a blower. It is important to keep artificial grass clean at all times.

Brushing. Synthetic grass fibers tend to lay flat after usage. Periodically brushing the fibers with a hard bristle broom will remedy this. Brushing should be done against the grain of the fibers.

- **Blowing.** Keep the artificial turf clean with a leaf blower or brush. If you did invest in a large area of artificial lawn, it's worth investing in a brush machine. If your synthetic lawn is the "infill type" (sand and/or rubber), and you do use a blower, do not blow directly into the synthetic lawn fibers as all the infill will blow away. Blow with an angle on the artificial grass.

- **Weed control.** By keeping the artificial lawn clean will prevent weed growth between the fibers. Weeds can be easily removed by plucking, brushing or raking the grass. Make sure weeds are removed before they can take root, especially along the edges of the turf. A number of environmentally friendly products can be purchased at home improvement centers and garden centers that kill algae, moss and weeds directly. If the instructions are followed carefully, the artificial lawn will not suffer any damage.

- **Chemicals.** Do not use any chemicals directly on your artificial grass. Household dishwashing liquid can be used if needed.

Rarely should it be necessary to make use of soap, as water will be more than adequate to clean your synthetic lawn. Damages to artificial grass can be repaired. The damaged piece of artificial turf is cut out and replaced by a new piece. It is therefore advisable to save any remnants of your synthetic grass left over after the installation. These can be used for any repairs. You must be aware of the fact that used artificial grass will look differently than new grass, even when it is the same product. A repair usually remains visible for a while. Over time, this difference in color will be less and less visible.

SYNSCAPE

Best valued synthetic grass in South Africa...

Look no further than the Synscape range artificial lawn. Most artificial grass distributors in South Africa sell the same ranges of the same grass types at the same prices. Very few synthetic grass retailers sell our Synscape product range.

That is why we call it our flagship product as it directly reflects our quality, standard and leadership in the synthetic grass industry in South Africa.

Our Synscape range is specially imported for its aesthetic value as a grass substitute for lawns. The height and density of the grass are carefully matched to provide the ultimate natural looking kikuyu grass effect.

The Synscape range is a ravishing artificial grass that can be installed at any location, whether in the shade or in sunny areas, very soft and yet, extremely strong and durable.

Synscape has become very popular the past year for areas such as around your swimming pool or Jacuzzi, garden, balconies, playgrounds, children rooms, restaurants, landscaping, etc.

Our Synscape artificial Lawn is guaranteed to add that extra touch of luxury, of class, of enjoyment to your preferred area. The fibers is made of high-quality polyethylene that will retain its realistic Kikuyu green color and texture, year after year. The grass fibers are UV protected, hence our 5-year warranty on color fastness. Synscape artificial Lawn is a safe investment for many years.

We provide Synscape in three different pile heights, 20mm, 25mm and 30mm also called Lux. Please note that prices may change without prior notice. Contact us for the latest prices.

How do I choose the correct artificial grass?

Turfscape Ranges of Synthetic Grass

For pricing on our Artificial grass ranges, please contact us On 083 661 8759 / 082 661 1134 or alternatively please refer to our website www.Turfsapes.co.za.
For prices on our grass types, just click on the name of the grass.
(P.S. You need an Internet connection for pricing functionality)

When deciding on installing Synthetic grass, the first thing to think about is long term investment. It is an expensive product, even more so if you cannot DIY your project. BUT... you don't have to pay extraordinary prices for Synthetic grass. Do consider cheaper artificial grass options. Sales people will tell you to stay away from imported grass for many reasons. There is no reason to follow that advice. Importers will often give you a better product for half the price and the same warranty that anybody offers you. Depending on the intended use, there are several options in various price ranges. Choose a budget-friendly alternative if aesthetic value is of lesser importance. An important thing when choosing Artificial grass is to have a look at the backing (It should be a tuff, hard, robust backing, and not a soft rubbery backing). There are many varieties of synthetic grass types now available, and to choose the correct type, is becoming increasingly difficult. However, there are certain criteria that you should take into account when you consider installing synthetic grass.

The first step is to decide which type of artificial grass is most suitable for your project. Base your decision on the nature of the usage, as well as your personal preferences in terms of color combinations and softness. The best way to get a good feel of the product is to physically compare samples, touch, walk, feel, test backing, etc. Whichever type of synthetic grass is most suitable depends on the location and intensity of expected use, i.e. high traffic volumes, go for more robust, shorter pile height, just aesthetics purposes, go for midrange pile height, garden, pool areas, go for a longer, softer pile height, etc. Inexpensive artificial turf does not necessarily have to be of poor quality, nor is expensive turf always of high quality. The quality of the synthetic materials used naturally determines the cost price and, as a result, the expected life span. What is the main purpose of the grass and what is it going to be used for? There are grass types that can be used for more than one purpose (multipurpose). Define the primary use of the grass and base your decisions on that. Should it be an infill or a non-infill product. Some grass types need to have an infill to fully justify its looks. It might also be that the infill is part of the warranty process. This will probably look very good, but, does the area you want to cover with synthetic grass be suitable for an infill type of grass, i.e. grass around a pool or grass on a steep slope. Guaranteed the infill will land in your pool, or will be washed away with heavy rains if installed on a too steep of a slope. Don't take the first synthetic grass sample shown to you. A good idea is to get samples of the grass types you're interested in, and then base your decision on what you see and feel. Remember, this should be a long term investment decision, and there is a big difference between synthetic grass, and fake grass.

PAVILLION

Pavillion is a non infill type grass. The fibres are brushed, making it quite dense. The grass is a vibrant green. Tend to be used in patios and pool surroundings. The backing is made of polyethylene. The rolls are 4m wide and the grass is priced per m² and is sold per linear meter.

Ideal for Patios, Balconies, etc type of installations

Fibre Grass

The pile height of Fiber Grass 173 is 10mm. These Fibre Grass types are not recommended for a permanent outdoor installation. The rolls are 2.5m wide and the grass is priced per m² and is sold per linear meter. Mainly used on cricket pitches, and should be glued down.

Ideal for Putt-Putt, Mini cricket, NOT for outside garden installations

Oval / SynCricket

Grass is specifically designed for cricket pitches. Oval & SynCricket is a more superior pitch cover than the fiber grass. The main advantages of Oval and SynCricket is the control of the speed the ball coming on to the bat, and it offers more grip for spin bowling. The grass is infilled with silica sand (brushed into the fibers) to protect the fibers and grass from excessive wear and tear, also act as the stimp speed controlling agent. Sand required is 4-6Kg/m². Rolls are 2m and 4m wide and the grass is Priced per m² and is sold per linear meter.

Artificial Cricket pitches. Durable and long lasting grass. Control speed of ball coming on to bat with Silica Sand

Turfscapes Ranges of Synthetic Grass

The most important thing to remember when installing Synthetic grass in your garden, is that artificial grass requires a different sub base and ground preparation than natural grass. You should NEVER lay Synthetic grass directly on top of your soil. Prepare a proper drainage sub base before installation. This will ensure you enjoy your Synthetic grass for many years to come. For more information on Subbases, refer to our webpage:- www.Turfscapes.co.za

SYN40/50/60

Our Soccer grass range, and mostly installed at playgrounds, with the 50/60mm directly underneath the jungle gyms for extra protection and critical fall height. The Syn 40 is infilled with silica sand and rubber granules to a specific height, making this grass ideal for playgrounds, soft and very durable. An additional R40.00 to R50.00 per m² must be added to the Synthetic Grass price for the infill material. Roles are 4m wide and the grass is Priced per m² and is sold per linear meter.

Suitable for playgrounds and soccer pitches

PRO-PUTT

The Pro-Putt artificial grass is another very popular product that is becoming the choice by most golfers. Most of Pro Shop's putting greens were done by us, using the Pro-Putt artificial grass.

A huge advantage of the Pro-Putt is the fact that its stimp speed can be varied from 7 to 10. This is done by brushing in a very fine washed silica sand between the fibers for optimum speed. Our Synscape grass is a stunning choice for fringes along your putting green

We have done all Pro-Shop's putting greens with Pro-Putt

SYN27 New Addition

Very similar than our Syn40/50/60 range but this grass is usaly installed in gardens where jungle gym equipment is planted. An infill of Silica sand or rubber or both is recommended with this grass making it very soft and very durable. An additional R40.00 to R50.00 per m² must be added to the Synthetic Grass price for the infill material. Roles are 4m wide and the grass is Priced per m² and is sold per linear meter.

Garden / Playground combination

Turfscape Ranges of Synthetic Grass

What are the Benefits of installing Synthetic grass?

The main reasons why most people choose artificial turf include low maintenance, high functionality and aesthetic or decorative value. Other benefits or advantages are:-

- No more spraying pesticides
- No more mowing
- No more watering (irrigation)
- No more fertilising or reseedling
- Far fewer vermin
- Minimum maintenance
- Always nice and green (decorative value depends on type of turf chosen)
- Ideal for people with (grass) allergies
- Looks real and wonderfully soft
- Can be used intensively and does not fade
- Some green when your area is just paving (aesthetic/decorative value)
- Dries quick (Huge benefit for Kindergardens)
- Easy to clean and will with stand all the South African's harsh climates
- Can also be used in shops, outlets, trade shows and exhibitions
- Ideal for holiday homes when maintenance of lawns is not practical
- Best solution for elderly homeowners who find the upkeep of lawns too much hard work
- Most suitable for roof gardens and swimming pool surrounds • Easy to clean and will with stand all the South African's harsh climates

As with everything in life, Artificial grass also have Pro's, Con's and Myths. Refer to our webpage:- www.Turfsapes.co.za for more information and please read our wiki's regarding Synthetic grass. Guarantee it will help you make a more informed decision when considering installing Artificial Grass.

SynFine

The Synfine is a very light duty artificial grass that is not suitable for permanent installations. The pile height of the Synfine is 10mm. The Synfine is mainly used as a temporarily artificial grass carpet for kids to play on in a safe environment or exhibitionists for display purposes. The Synfine grass backing is very soft, flexible and light weight, making it ideal for these purposes and transporting it.

Roles are 2m wide and the grass is Priced per m² and is sold per linear meter.

Ideal for Exhibitionists, Advertising, etc type of installations

Garden Grasses (Tempo, Parklands, Country Club)

Our Garden grasses are the local grasses sold by most other retailers in South Africa. These grass types are mainly supplied by Duraturf (Belgotex). The roles are 4m wide and is selling per linear meters. We do NOT carry any stock and needs to order the artificial grass as ordered. They all are Non infill types

Belgotex Range of Artificial Grass

Disadvantages of Synthetic Grass

Apart from the fact that Artificial grass is expensive, other disadvantages are that artificial grass is much warmer in the summer heat than natural grass. This is due to the fact that artificial grass do not Photosynthesis as normal kikuyu grass. It's also bit darker than natural grass, which leads itself to attract the sun more

A visual disadvantage of artificial grass is the fact that it does not change color along with the seasons. This disadvantage can be 60% eliminated by choosing the correct color/type of synthetic grass. Artificial grass may be low maintenance (see below) but certainly not entirely maintenance-free, as is often believed.

Long-term use also subjects the artificial grass to normal wear and tear which lead to the synthetic grass flattening. The level of wear and tear depends on how intensely the turf is used. Certain actions can be taken to prevent flattening. This a should be part of your normal maintenance routines. See below for more information on maintaining your synthetic grass.

The biggest disadvantage and/or aspect that is often overseer or not talked about, is the fact that artificial grass requires professional installation. Very often an unprofessional installation (certainly when it comes to large surface areas) often leads to unsatisfying results. Remember, In the long term, a professional installation pays for itself, also in terms of the pleasure derived from use and the durability of the synthetic grass.

Color Grass

Our Kaleidoscope of synthetic grass will definably bring color to your projects. Colors are fixed and cannot be changed to any other color. Other colors cannot be ordered.

Our range of color synthetic grass is covered by Green, Turquoise, Grey, Blue, Red and Brown.

The grass is not a stock item and is ordered per m². Orders normally takes 2-3 days

Green, Blue, Brown, Turquoise & Grey

Turfscape Ranges of Synthetic Grass

Synscape is our flagship grass. Artificial grass cannot look more realistic than our Synscape range. The Synscape is handsdown one of the most popular artificial grass currently in South Africa for garden, balcony, pool, patio, rooms or whatever your need maybe. One of these synthetic lawn types will enchant you and be the perfect choice for your project. Not only do we rave about the Synscape itself, but have a look at the price structure of the product range. Look no further than the Synscape range artificial lawn.

Maintaining the Synthetic Grass

It is possible to enjoy an attractive, luxurious artificial lawn for many years with the minimum of maintenance.

Some cleaning tips:-

- **Cleaning.** Remove leaves, weeds and other debris immediately by means of a blower. It is important to keep artificial grass clean at all times.

Brushing. Synthetic grass fibers tend to lay flat after usage. Periodically brushing the fibers with a hard bristle broom will remedy this. Brushing should be done against the grain of the fibers.

- **Blowing.** Keep the artificial turf clean with a leaf blower or brush. If you did invest in a large area of artificial lawn, it's worth investing in a brush machine. If your synthetic lawn is the "infill type" (sand and/or rubber), and you do use a blower, do not blow directly into the synthetic lawn fibers as all the infill will blow away. Blow with an angle on the artificial grass.

- **Weed control.** By keeping the artificial lawn clean will prevent weed growth between the fibers. Weeds can be easily removed by plucking, brushing or raking the grass. Make sure weeds are removed before they can take root, especially along the edges of the turf. A number of environmentally friendly products can be purchased at home improvement centers and garden centers that kill algae, moss and weeds directly. If the instructions are followed carefully, the artificial lawn will not suffer any damage.

- **Chemicals.** Do not use any chemicals directly on your artificial grass. Household dishwashing liquid can be used if needed.

Rarely should it be necessary to make use of soap, as water will be more than adequate to clean your synthetic lawn. Damages to artificial grass can be repaired. The damaged piece of artificial turf is cut out and replaced by a new piece. It is therefore advisable to save any remnants of your synthetic grass left over after the installation. These can be used for any repairs. You must be aware of the fact that used artificial grass will look differently than new grass, even when it is the same product. A repair usually remains visible for a while. Over time, this difference in color will be less and less visible.

SYNSCAPE
